TRAINING DAY 4 REPORT
Understand Cracker and Information Warfare

Today, I learned some important concepts

- ## Who Is a Cracker?

A cracker is also called Black Hat Hacker.

Cracker is an individual with extensive commuter knowledge whose purpose is to breach or bypass internet security or gain access to software without paying royalties. The general view is that, while hackers build things, crackers break things. A cracker is a computer user who attempts to break into copyrighted software or a network computer system.

- ## Information Warfare

1."Tactical and strategic use of information, to gain an advantage."

2. In the earlier days, information was more physical

3. Groups of people involved, especially Government, to tackle enemies

4. Countries spent millions in secret intelligence and spies

5. Military used weapons and army power to send policy implementations
